The above ratings represent the generating set capability guaranteed within  $\pm 3\%$  at the reference conditions equivalent to those specified in ISO 8528/1, ISO 3046/1 and BS5514/1

**NOTES:**

- 1- The applicable voltage range is 380 V to 480 V for 60 Hz applications.
- 2- This generating set is of fixed speed of 1800 rpm.
- 3- **DM10** is the prime power rating of the generating set, where a variable load and unlimited hours usage are applied on the generating set which an average load factor of 80% of the prime rating over each 24 hour period. Noting that a 10% overload is available for 1 hour in every 12 hours operation.
- 4- **DM11** is a standby power rating of the generating set, where a variable load limited to an annual usage up to 500 hours is applied, with 300 hours of which may be continuous running. Noting that no overload is permitted.
